

CONSUMER MATH SKILLS

DECISIONS

Grades 3 & up

Decisions is a money management game played in the context of the stock market. Players attempt to increase their wealth through strategic decisions making in buying and selling stocks. The emphasis is on accurate computation and record keeping. Players practice communication skills because each move requires players to explain how they arrive at their answers. Play is open-ended. The game may end after a certain time limit has been reached or a predetermined number of times around the board has been achieved by each player. At the end of the game, compute the value balances for each stock, add the value balances, count the cash on hand and add it to the value balance sum to determine net worth. The total is the net worth of the player. The player with the highest net worth at the end of the game is the winner. 2-4 players.
